GREAT NORTHERN breaks another all-time record! Just 24 hours before Pearl Harbor—Great Northern Railway made history in completing the 1941 iron ore haul by breaking all previous records for one season. It transported 25,500,000 tons of this vital material from mines to Great Lakes docks. If equipment necessary to move this ore were assembled into one train it would be nearly 1,800 miles long—the rail distance between St. Paul and Seattle! This achievement was in addition to and did not interfere with the transportation of vast quantities of other goods over lines of the Dependable Great Northern Railway.
