

To save hours for

FACTORY PRODUCTION

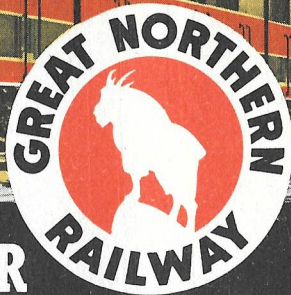

★ Great Northern Railway salutes American industry for the results it is accomplishing in the drive for victory. What the railroads are doing to speed essential materials to industry is of vital importance. Thus you should know that Great Northern Railway has adopted Diesel-Electric power to expedite the movement of freight through Marias Pass in the Rocky Mountains.

In the pursuits of normal business, or in defense industries, *not a single hour of production time has been lost through any failure of the Great Northern Railway.* That is our record and we mean to maintain it.
