RAILWAY AGE

THE STANDARD RAILROAD WEEKLY FOR ALMOST A CENTURY

FEBRUARY 11, 1952

A fleet of 76 General Motors Diesel road locomotive units on the Chicago Great Western Railway is now handling principal scheduled trains as heavy as 5600 tons—displacing steam engines hauling a maximum of 2800 tons. These road units, plus a fleet of GM Diesel switchers, enable the Great Western to show an annual return on investment of better than 39%.
