How Winter Affects Air Brakes . . . p. 24

RAILWAY AGE

One of Five Simmons-Boardman Railway Publications

HERE COMES TOMORROW---FAST!

THE TWO new lightweight General Motors Aerotrains are about to start their tour of American railroads. This great Electro-Motive development might well revolutionize travel by rail. With steel underframe and aluminum body, the 100-mile-an-hour Aerotrain is 50% lighter than conventional trains. It costs much less to build and much less to operate. It is Electro-Motive's current contribution to the thinking designed to win passenger traffic for railroads—and help to make it profitable.
