MODERNIZE and ECONOMIZE

*Great Northern's First Two GM Diesel Units
Remanufactured by Electro-Motive*

Two General Motors switching locomotives—in service on the Great Northern since January 1938—have recently been modernized by Electro-Motive. The original Winton 201-A engines have been replaced with rugged 567 engines. This, plus many other improvements and refinements, enable these units to do more work at less cost.
