Extra Sightseeing—No Extra Cost

Yellowstone Lake, elevation 7,730 feet, of great depth and 20 miles across, is the greatest high mountain lake in all America. Its shores are heavily wooded and indented. The snow-capped Absarokas rise from its edge to altitudes of 10,000 to 11,000 feet.

A new geyser, yet unnamed, has erupted in Yellowstone. This giant is by far the largest in the Park, rivaling the famous Excelsior Geyser, which eased activity in 1888, in volume and form. The crater of the new geyser is 25 feet across.

There are more geysers in Yellowstone than in all the rest of the world.

For all the rational Parks Yellowstone is the wildest and most universal in its appeal. There is more to see there—more different sorts of things, more natural wonders, more strange and curious things, more scope, more variety—a longer list of astonishing sights than any half dozen of the other parks combined could offer. Daily new, always strange, ever full of change, it is the circus park, Nature's Coney Island. It is the most human and the most popular of all the parks. —Emerson Hough, author of "The Covered Wagon."
